

Gold 6.x or 5.x Program Updates on CD

Please load the enclosed update as soon as convenient. It contains all the latest Gold programs.

Prior to loading this update you should ensure that you have taken a data backup copy and also have a recent system copy.

To load the programs from the CD:-

On the main console log into ROOT and make sure everybody else is off the system.

Note: Linux users should click the Command Line icon from the main linux console.

Type: **loadgoldcd** (all lower case letters and no spaces) then press <enter>.

When the menu appears select Option 2 – “Load Gold 6” or “Load Gold 5.6”

Having ensured you have backups as described place the CD in the CD tray on the SERVER and close in the usual way.

Once the CD has been verified you will be asked whether you wish to continue the update. Enter **Y** if you wish to do so. The compilation date of the CD is shown on the right side of the screen.

When the update is complete you will be returned to the root prompt.

You should now bring the system down, reboot and continue as usual.

Remove the CD from the tray and write on it the date you updated the system so you know it has been loaded. It is important that you do not load an older version than the current version on your system.

To load the latest version of Gold On-Line Manuals (only required for Gold 5.x)
Enter **loadgoldcd** and select Option 5 (load manuals) from the menu.

To Check the Gold Version (only required for Gold 6.x)

After the update had loaded and the server rebooted the version should be checked. If terminal server is in use the version should be checked on the Windows platform as well as Unix. From within Gold, use Ctrl Z (hold down the Ctrl key and press Z) for the “About Gold” screen to check the version.
